Agenda

- High and Volatile
- Fragmented and Diffuse
- Supply Chain Impact
- Eight Buying Strategies
- Five Policy Issues
- The Bottom Line
High and Volatile
World energy requirements increasing

- Energy consumption forecast to increase 52% by 2030

Growth in Global Energy Consumption, 2007 vs. 2030

- Non OECD
  - 2007: 225 Quadrillion BTUs
  - 2030: 413 Quadrillion BTUs

- OECD
  - 2007: 247 Quadrillion BTUs
  - 2030: 309 Quadrillion BTUs
Asia leading the growth

- China accounts for most of the demand growth
- Developed economies growing at 1% or less

Growth in Energy Consumption by World Area

Note: Size of bubble proportional to actual energy consumption
Production falling behind

- Many locations declining in production

**US and North Sea Oil Production**

*estimates*

- Million Barrels per day
- 2000 2001 2002 2003 2004 2005 2006 2007*

Percent Sourced from Low-Cost Countries
Logistics cost increasing consumer prices?

Logistics Cost as a Percent of GDP
8 Buying Strategies
A fragmented buy

- Purchasing
- Transportation
- Materials
- Logistics
- Distribution
- Warehousing

Percent of Companies Centralizing the Energy Buy

Centralized 24%
Decentralized 76%
“[We have] 18 regional business units in the US and each one is responsible for its own energy expenditures” – Bryan Warshofsky, Director of Purchasing Applications.

“We found that we were spending 20% more at one manufacturing plant than at an identical one in another state.” – Jacques Lalauze, Gemalto

“[There is] a lot of gray area. It is often fragmented among Facilities, Transportation, Indirect, Manufacturing, Logistics, and Operations.” – Corporate Purchasing Manager, US consumer electronics retailer

“Each plant manages it decentrally” – Henry Turner, Honda

“Several folks manage power contracts” – Rich Walters, Air Products
A large but invisible expenditure

Energy as a Percent of Sales

Percent of Sales

Mfg.  Retail  Carriers

- In other purchased materials
- From energy suppliers
Potential strategies

Supply Chain Strategies
1. Centralize purchasing
2. Join a buying consortium
3. Sign contracts at forecast rates
4. Reduce consumption (value engineering)

Financial Strategies
5. Buy in advance at the current price
6. Buy options

Pricing Strategies
7. Pass costs on via a floating surcharge
8. Pass costs on and embed in the product price
Overall strategy performance

Cumulative Cost of Each Strategy, October 2005-October 2006

Most strategies have similar results

Pass-through pricing scenarios

- Centralized Purchasing
- Price Increase
- Surcharges
- Stockpile
- Options
- Contracts
- Buying consortium
- Value Engineering

Millions of US Dollars
The best strategies

- Buying consortium
- Centralized Purchasing
- Value Engineering
- Options
- Stockpile
- Contracts
- Surcharges
- Price Increase
- Spot

The Bottom Line
Keeping perspective: the long view

Evolution of U.S. Energy

Quadrillions of BTUs Consumed per Year

1800 1900

Wood Coal Petroleum Natural Gas Nuclear Electric

Hydroelectric
Manufacturers:
stay lean and manage the spend

- Don’t reverse lean
  - Energy costs dwarf vs. benefits of being lean
- Establish a program to manage energy spend
  - Any strategy 10-100% better than none
- Re-assess mode, frequency quarterly
  - Unpredictable fuel prices and surcharges need alerts
- When off-shoring, consider whether a doubling of oil prices would change the decision
  - Dual sourcing may become necessary at higher oil prices
Realign budgets more than once a year

- 83% have a yearly planning horizon
Advice for carriers

• Don’t rush to develop alternative fuel vehicles.
  • Most AFV technologies are in their infancies and many companies cannot justify investing in them at present.

• Actively manage fuel spend.
  • Carriers, especially airlines and ocean shipping lines, that proactively manage fuel expenditures, save 10-15% on fuel.

• Reduce dependence on petroleum.
  • Airports and airlines can cost-effectively modify or replace ground handling equipment to operate on LPG, ethanol, or electricity.

• Assess routes and services for profitability.
  • Carriers should analyze the profitability of routes and services to determine when, where, and how much to refuel based on regional fuel cost advantages.
Advice for policy makers

• Consider supply chain costs and benefits when setting policy for infrastructure and alternate fuel technology.
  • Policy affects, and could reduce, the efficiency, speed, and convenience of supply chains, engendering an unforeseen economic cost.

• Don’t jeopardize infrastructure programs to fund alternative fuels.
  • Currently, US tax breaks for ethanol are funded at the expense of the Federal Highway Trust Fund, while highway infrastructure gaps cause increasing congestion.

Boston Strategies International is a global management consulting firm that helps market leaders achieve competitive advantage through supply chain management through:

- Supply Chain Consulting that helps supply chain leaders make high-stakes decisions
- Cost and Pricing Intelligence that facilitates negotiations, planning, and budgeting
- Market Outlooks that helps identify emerging issues that affect their supply chains, and quantify the impact that they will have
